PRAC 5

Step 1:

Open **GitHub Desktop**

Click **File → New Repository**

Fill details:

Name: DataScienceProject

Local Path: Choose folder

Click ✅ **Create Repository**

(b) Push Repository to GitHub

Click **Publish repository**

Select:

Keep it **Public** (or Private if needed)

Click **Publish Repository**

👉 Now your project is live on GitHub

(c) Create Branch + Palindrome Program

Click **Current Branch → New Branch**

Name it: GIT-EXAM-1

Click **Create Branch**

👉 Now create file:

File name: program2.py

Code (Palindrome Check):

```
s = input("Enter a string: ")

if s == s[::-1]:
    print("Palindrome")
else:
    print("Not Palindrome")
```

(d) Create program1.py (Squares)

Create file: program1.py

✨ Code:

```
for i in range(1, 11):
    print(i*i)
```

(e) Commit & Push Changes

Go to **GitHub Desktop**

You will see changes listed

Add message:
☞ Added program1 and program2

Click ✅ **Commit to GIT-EXAM-1**

Click **Push origin**

☞ Now open GitHub in browser and verify files

(f) Create IGNORE Folder & Files

Inside project folder:

Create folder: IGNORE

Inside it create:

test1.txt

test2.txt

◆ **(g) Create .gitignore File**

Create file: .gitignore

Add this line:

IGNORE/

☞ This tells Git to ignore the folder

◆ **(h) Commit & Verify IGNORE is NOT pushed**

In GitHub Desktop:

Add commit message: Added gitignore

Click **Commit**

Click **Push**

Go to GitHub repository:

✅ You will NOT see IGNORE folder

PRAC 7

Clone Repository in GitHub Desktop

Exact Click Steps:

Open **GitHub Desktop**

Top menu → click **File**

Click ☞ **Clone Repository**

Select tab ☞ **URL**

Paste:

https://github.com/KalyanM45/Spam-Email-Detection.git

Choose **Local Path** (click Choose…)

Click ✅ **Clone**

✓ Repository downloaded

🔹 (b) Show Branch Creation is NOT Allowed

☞ Try creating branch:

Top bar → click **Current Branch**

Click **New Branch**

Name:

test-branch

Click **Create Branch**

☞ Now push it:

Click **Publish Branch / Push origin**

❌ You will get error (or cannot push)

🔹 (c) Fork the Repository

Steps:

Click **View on GitHub** (in Desktop)

On website:

Top-right → click **Fork**

Select your account

✓ Now repo copied to your account

🔷 (d) Clone YOUR Fork + Create Branch

👉 Clone fork:

In browser → open YOUR fork
